## 用途 (pictures)

# Safety tips

Pliers should be oiled regularly. A drop of oil at the hinge will lengthen the tool life and assure easy operation.

Don't use pliers for cutting hardened wire, unless specifically manufactured for this purpose.

- When cutting wire with pliers, you should always wear glasses or goggles.
- Handles are provided for comfort. They are not intended to give user any degree of protection against electric shocks and should never be used on live electric circuits
- Don't expose pliers to excessive heat. This may ruin the tool.
- Don't use pliers as a hammer.
- Don't hammer on the handles. They may crack or break.
- Don't extend the length of plier handles to secure greater leverage.
- Don't use pliers on nuts or bolts. A wrench will do a better job and with less risk of damage to the fastener.

## Frequently asked questions

The head profile on the screw has deformed to such an extent that it cannot be unscrewed with a screwdriver. Which Unior tool can be used in this case? 407/4DP screw pliers are the best choice for unscrewing screws with a damaged head profile.
